

Bottom left: Standing 7'6" tall, Infinity's Reference Standard Series III is the Ralph Sampson of stereo speakers. For \$32,000, you get four rosewood modules (only two are shown here)—two contain six 12" polypropylene woofers each and the other two house 12 electromagnetic induction-midrange drivers and 36 electromagnetic induction tweeters each. Below right: At \$12,900, the French-made Goldmund Reference turntable costs as much as a mid-size car, but many purists swear by its computer-controlled motor and suspended subchassis, which rests on a 20"-tall steel stand (not shown), from Christopher Hansen Ltd., Los Angeles. (The Goldmund T3B tonearm shown increases the price \$2800.) Right: The Sequerra Model 1 Spectrum Analyzer/FM Tuner analyzes signal specifics while picking up FM stations, by United Sounds of America, \$5000.
